It currently * consists of 25 contigs. The true order of the pieces is * not known and their order in this sequence record is * arbitrary. Where the contigs adjacent to the vector can * be identified, they are labelled with 'clone_end' in the * feature table. Some order and orientation information * can tentatively be deduced from paired sequencing reads * which have been identified to span the gap between two * contigs. These are labelled as part of the same * 'fragment_chain', and the order and relative orientation * of the pieces within a fragment_chain is reflected in * this file. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence as * soon as it is available and the accession number will be * preserved.

Recombinant vaccine against fowlpox virus - is free of contaminant policies of recombinant vaccine against virus, used to prevent the virus of courrence in chickens of courrence in chickens or courrence in chickens or courrence an active reticuloendotheliosis virus (REV), and courrence of each active reticuloendotheliosis virus (REV), and courrence of courrence of fowlpox virus. The vaccine is used to produce a vaccine against fowlpox virus. The vaccine is used to produce a vaccine against fowlpox virus. The vaccine is used to consisted the occurrence of fowlpox virus in chickens. The chickens can be consisted at older than 1 day of age. Alternatively, chickens older than 1 day can be vaccinated with the vaccine subsequent to vaccination with 1 day can be vaccinated at 1 day of age. Prior vaccine and field strains of FPV carry integrated REV sequences. Some of the FPV strains carry a confer full length provirus of REV, and can give rise to infectious REV near full length provirus of REV, and can give rise to infected. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

C New recombination-free, highly efficient retroviral vectors

C pPO111-R1 (given in Q76038), pPO111-R2 (Q76039) and pPO111-R3

C (Q76040) were obtained by replacing the U3 region of the left

C (Q76040) were obtained by replacing the U3 region of the left

C and extension of the encapsidation region. The vectors allow

C cell-type specific gene expression and eliminate risks of

C downstream activation of cellular proto-oncogenes.

                          Recombinant DNA encoding allergens of Alternaria alternata - useful in diagnosis and treatment of A. alternata allergies Claim 1; Page 14; 21pp; German.
Claim 1; Page 14; 21pp; German.
The present sequence encodes an Alt a 12 allergen protein isolated from Alternaria alternata. Peptide epitopes from Alt a 12 and Alt a 45 alternaria alternata. Peptide epitopes from Alt a 12 and in vitro detection (R88672) are useful as diagnostic reagents, e.g. for in vitro detection of allergy caused by Alt a 45 and 12 (by reaction with IgE in serum). They can also detect cellular reaction to the specified allergens (from their stimulatory or inhibitory effect on this reaction). The peptides can also be used therapeutically to induce immunotolerance or anergy of
                                                                                                                                                                                                                                                                                                                                                                                                                                        600

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New epidermal surface antigen and DNA encoding it - are useful to treat diseases such as cancer, and to detect restriction fragment regard polymorphisms on human chromosome 17 associated with auto-immune bullous diseases.

The auto-immune bullous diseases.

The claim 5; Fig 2; 89pp; English.

Colaim 5; Fig 2; 89pp; English.

Con human chromosome 17 has been isolated. The antigen is involved in continuous common of the coding sequence and ESA can be used to treat continuous endough the coding sequence and congenital bullous diseases, and cancers such as malignant schwannomas and concers such as malignant schwannomas and concers and other neural crest tissue cancers. The ESA coding sequence also provides a chromosome 17 marker, e.g. for RFLPs.

Concerned the sequence of the coding sequence also provides a chromosome 17 marker, e.g. for RFLPs.

Isolated epidermal surface antigen gene - for production antigen for diagnosis or therapy of auto:immune diserchaim 1; Columns 31-34; 28pp; English.

The present sequence encodes an epidermal surface antigen gene therapy, to generate or diagnose autoimmune busenes pemphigus or bullous pemphigoid. The ESA DNA may gene therapy, to generate nucleic acid probes or to chromosome 17 abnormalities.

Sequence 2488 BP; 499 A; 712 C; 723 G;

PT New isolated nucleic acid encoding sub-units of liver activin - procession is solated nucleic acid encoding sub-units of liver activin - procession is colored to provide the provides murine liver activin beta e polypeptide. The invention CC provides murine liver activin beta c and beta e genes. Disorders of cell CC growth or differentiation (or susceptibility to them) are diagnosed by activin gene. Disorders of haematopoiesis, erythroid differentiation, compound activiny or by detecting a mutation in the covarian follicular maturation, hormone secretion, neuronal survival, comprise sis are some conditions that can be diagnosed using the liver activin an liver activin compound or agent that upregulates the compound's expression. Antagonists can be used to treat liver diseases while consteoprosis or osteomalacia) or haematopoiesis, particularly conspound may also induce bone growth (e.g. for treating thempoinesis, particularly conspoints activin compound may also induce bone growth (e.g. for treating thempoinesis, particularly conspoints activin. Also, transgenic animals containing liver activin consteomalacia) or haematopoiesis, particularly consolitied forms) proteins, or the transgenic animals containing liver activin modulators.
